

ONCourse™

Ensure your team is trained and ready for the job at hand

Owners, EPC Firms, and Contractors benefit from a structured approach to change management and certification tracking for any type of training. O3 provides a purpose-built platform to help manage and track training progress across any initiative including Advanced Work Packaging, WorkFace Planning, as well as standard jobsite training requirements such as Safety, and Orientation.

Why It's Needed

Multiple Companies Involved

Managing training and certification compliance on a jobsite across multiple companies is challenging and often data is not shared. Projects are forced to revert to basic tools such as Microsoft Excel.

AWP & Agile Change Management

Learning a new process like Advanced Work Packaging or Agile Project Management can be daunting and tracking courses manually with unclear objectives and metrics makes understand progress difficult.

What's Included

Training Management

- o Manage courses with pre-requisites, identify schedules by role, track attendance, and monitor the health of your training program

Learning Management

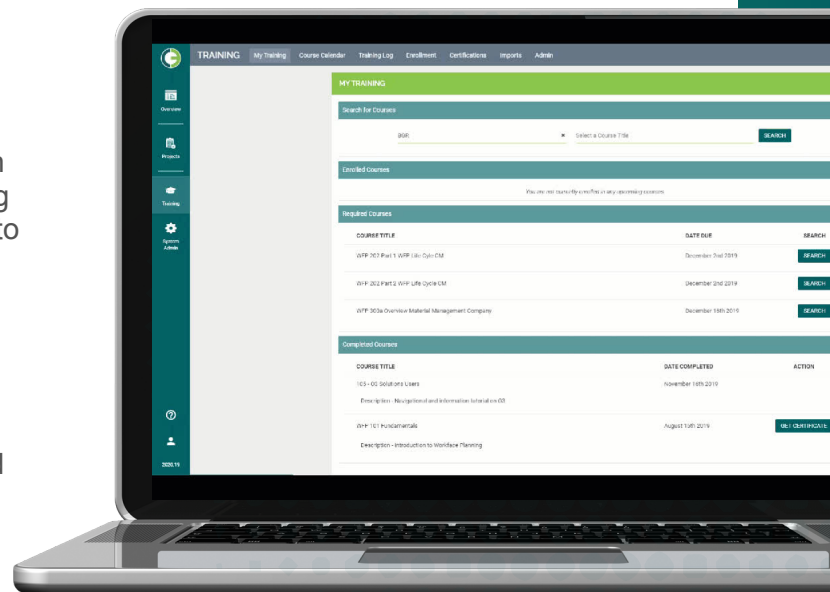

- o Design learning paths, guide users through stages of learning with tiered onboarding, and manage learning paths by company or role

Training Metrics

- o Measure course completion metrics through pre-configured dashboards

Certification Management

- o Track required certifications, manage certification expiration dates, and identify roadblocks with any potential certification gaps

ONCourse™ is most valuable in areas where training is essential, such as offshore projects or projects with multiple contractors. The greater the need for training, the greater the value.
